

PRD & Implementation Plan: WhatsApp Rolling Community Governance & Voting Engine

****Project:**** TCF Founder Ecosystem & Governance

****Target Execution Environment:**** Claude Code / AI Agent

****Goal:**** Pivot from a synchronous physical stage gathering tool to an asynchronous, rolling WhatsApp group engagement, voting, and squad-activation engine.

1. Executive Summary & Problem Statement

1.1 The Problem

The current platform was built for live, high-pressure physical room gatherings (stage mic spotlight, 2-minute countdowns, live reaction confetti, synchronized projector screens). In reality, community engagement happens continuously inside ****WhatsApp Groups****.

1.2 The Solution

Convert the web application into an ultra-low-friction mobile web application that integrates seamlessly with WhatsApp group rhythms:

1. ****Frictionless Sign-In:**** 5-second onboarding taking only ****First Name + Avatar Color**** (stored in localStorage + `tcf\_vid` cookie).
2. ****Progressive Profiling:**** Detailed profile fields (WhatsApp number, skills, sector, bio) are moved to an optional "More Details" drawer accessible via profile tap or triggered upon squad commitment.
3. ****WhatsApp Poll Simplicity:**** Clean, mobile-first card interface where voting is as fast as a WhatsApp native poll.
4. ****2-Tier Action System:**** Members can either ****Vote (Opinion)**** or ****Join Execution Squad (Action + Skill tagging)****.
5. ****Rolling Time Windows & Auto-Close:**** Rounds have deadlines (e.g., 24h, 48h, 5 days) with automated closure and countdowns.
6. ****WhatsApp Blast Deck for Admins:**** 1-tap copy/share buttons generating pre-formatted WhatsApp markdown messages for Round Launch, Mid-point Pulse, and Final Results with Squad lists.

2. Core User Personas & User Journeys

2.1 Persona 1: WhatsApp Group Member (Founder / Operator)

- * ****Entry Point:**** Clicks a link shared in the WhatsApp group (`https://.../?round=...`).
- * ****First Visit:**** Bottom sheet prompts: "What's your name?" and a 5-color selector. Takes < 5 seconds.
- * ****Voting:****
 - * Views the active community challenge or ballot options.
 - * Taps an option to cast a standard vote.

- * **Optionally** taps "👉 Join Execution Squad" → selects primary superpower (Engineering, Ops, Funding, Marketing, Domain Expert).
- * ****Post-Vote Viral Loop:**** Taps "Share to WhatsApp Group" to drop a pre-formatted message: *"I just voted in the TCF Weekly Pulse. 34 founders have voted. Cast your vote before Friday 6 PM 👉 [Link]"*.
- * ****Profile Management:**** Tapping their avatar at the top opens the ****More Details**** sheet to add their WhatsApp number, bio, and LinkedIn.

2.2 Persona 2: Group Admin / Community Lead

- * ****Admin Setup:**** Opens the host dashboard (`?host=<key>`).
- * ****Create Rolling Round:****
 - * Enters question or selects top submitted community problems.
 - * Sets deadline duration (e.g., 12 Hours, 24 Hours, 48 Hours, 3 Days, 7 Days, or Custom).
- * ****Automated Broadcasts:****
 - * Clicks "Share to WhatsApp" to launch the round with pre-populated WhatsApp text.
 - * Taps "Mid-point Nudge" on Day 2 to remind lurkers.
 - * On round expiration, clicks "Copy Results Summary" to paste certified outcomes and working squad members into WhatsApp.

3. Detailed Functional Requirements

Feature 1: Streamlined Sign-In & Progressive Profiling

- * ****Initial Onboarding Modal:****
 - * Input: ``Name`` (Required, text)
 - * Input: ``Avatar Color`` (Required, pick from 6 accessible pastel/emerald accents)
 - * Zero other mandatory fields.
 - * Action: "Join Group Ballot" button saves locally and syncs to ``/api/attendees``.
- * ****Profile Drawer ("More Details")****
 - * Trigger: Tapping the user avatar badge in the top navigation bar.
 - * Fields:
 - * Display Name (editable)
 - * Avatar Color (editable)
 - * WhatsApp Phone Number (optional, for squad coordination)
 - * Primary Superpower / Skill (Product, Engineering, Design, Capital/Investment, Operations, Growth/Marketing)
 - * Venture / Organization (optional)
 - * Short Bio / Tagline (optional)
 - * Actions: "Save Profile" and "Sign Out / Switch Profile".

Feature 2: WhatsApp-Style Rolling Ballot UX

- * ****Active Round View:****
 - * Clean, distraction-free mobile card layout.
 - * ****Header:**** Active poll title, deadline countdown timer (e.g., "⌚ Closes in 18h 42m"), and participant count ("👥 43 members participated").

- * ****Option Cards:****
 - * Option title and succinct description.
 - * Category badge and author credit.
 - * ****Action 1 (Vote):**** Single-tap button: *"Vote for this"* (shows checkmark when selected).
 - * ****Action 2 (Commit):**** Secondary button: *"👉 Join Squad"* (opens quick skill selector if not already set).
- * ****Anti-Groupthink (Blind Balloting):****
 - * Before voting: Shows only total voter turnout (e.g., "52 votes cast so far"), concealing percentage breakdown to prevent herd mentality.
 - * After voting: Reveals live percentage bars and current rank to the voter.

Feature 3: Automated Time Windows & Round Lifecycle

- * ****Round Data Model Extensions:****
 - * ``durationHours``: Number of hours active.
 - * ``endsAt``: ISO timestamp string when the round automatically closes.
 - * ``isClosed``: Boolean flag.
 - * ``allowSquadSignup``: Boolean (defaults to true).
- * ****Automated Expiry:****
 - * Backend background check or server-side expiration validation on ``GET /api/round``. If ``now > endsAt``, round is marked ``closed``.
 - * Real-time SSE event ``ROUND_CLOSED`` fires to all connected clients.

Feature 4: Admin WhatsApp Blast Generator

* Provide a ****"WhatsApp Broadcast Deck"**** in the Host Console with one-click ``Copy to Clipboard`` and direct ``wa.me/?text=...`` deep-links:

1. ****Launch Template:****

...

🔴 *TCF COMMUNITY PULSE IS LIVE* 🔴

Question: {roundTitle}

Options:

① {opt1}

② {opt2}

③ {opt3}

👉 *Vote in 10 seconds:* {appUrl}?round={roundId}

🕒 *Voting closes:* {formattedDeadline}

...

2. ****Midpoint Reminder Template:****

...

🕒 *VOTING UPDATE: 24 HOURS LEFT*

{totalVotes} founders have voted! It's a close race between #{top1} and #{top2}.

Make your voice count before {formattedDeadline}:

```
👉 {appUrl}?round={roundId}
```

```
...
```

3. ****Certified Results & Squad Formation Template:****

```
...
```

```
🏆 *OFFICIAL RESULTS: {roundTitle}*
```

```
Total Ballots Cast: {totalVotes}
```

```
🏆
```

```
*Winner:* {winningTitle} ({winningVotes} votes - {winningPercent}%)
```

```
🥈
```

```
*Runner Up:* {secondTitle} ({secondVotes} votes)
```

```
👥 *FOUNDING EXECUTION SQUAD:*
```

```
{squadMemberListWithSkills}
```

```
👉 See full breakdown & join the squad: {appUrl}?round={roundId}
```

```
...
```

Feature 5: Voter Shareback ("I Voted" Viral Hook)

* Immediately upon voting, display a share pill:

* ****"📱 Share to WhatsApp Group"****

* Auto-generates WhatsApp message:

```
`"✅ I just voted on '{optionTitle}' in the TCF Weekly Pulse. {totalVotes} founders  
have voted so far. Cast your ballot before {deadline} 👉 {appUrl}"`
```

```
---
```

4. Technical Specifications & File Architecture

4.1 Backend (`server.ts`)

1. ****Extend Round State:****

* Add `endsAt?: string` and `durationHours?: number` to `RoundState`.

* Add endpoint `POST /api/round/extend` (allow host to add +24h to deadline).

* Update `GET /api/round` to evaluate expiration dynamically:

```
```typescript
```

```
if (activeRound.status === 'open' && activeRound.endsAt && new Date() > new
Date(activeRound.endsAt)) {
```

```
 activeRound.status = 'closed';
```

```
 persistState();
```

```
 broadcast({ type: 'ROUND_CLOSED', round: activeRound });
```

```
}
```

```
...
```

#### 2. **\*\*Squad Member Tracking in Ballot:\*\***

\* Extend `BallotOption` to maintain `squadMembers: Array<{ id: string; name: string; superpower?: string; whatsapp?: string }>`

\* Endpoint `POST /api/round/join-squad`: Allows a voter to attach their name and skill to an option's execution squad.

#### 3. **\*\*Broadcast Template Endpoint / Helper:\*\***

\* ``GET /api/round/share-text?type=launch|midpoint|results``: Generates pre-filled WhatsApp text strings on demand.

### ### 4.2 Frontend Components (``src/components/``)

\* ``src/components/QuickSignInModal.tsx``: Ultra-clean 2-field modal (Name + Color avatar).

\* ``src/components/ProfileDetailsDrawer.tsx``: Expandable bottom sheet for full founder profile (WhatsApp, skills, bio).

\* ``src/components/RollingBallotView.tsx``: Mobile-first, card-based poll view with countdown, 1-tap voting, squad commitment, and WhatsApp share buttons.

\* ``src/components/WhatsAppBlastModal.tsx``: Host component displaying WhatsApp message templates with 1-tap copy/launch.

---

## ## 5. Phased Implementation Tasks for Claude Code

### ### Phase 1: Authentication & Profile Refactor

- [ ] Create ``QuickSignInModal.tsx``: Name input + color swatch selector.
- [ ] Refactor ``FounderCheckInModal.tsx`` into ``ProfileDetailsDrawer.tsx`` (More Details).
- [ ] Update header user button in ``App.tsx`` and ``AudienceParticipationView.tsx``: Clicking avatar opens ``ProfileDetailsDrawer``.

### ### Phase 2: Rolling Ballot & Expiration Logic

- [ ] Add ``endsAt`` (ISO string) and ``durationHours`` support in ``server.ts`` for ``/api/round/open``.
- [ ] Add auto-close evaluation in ``server.ts`` upon request and via 60-second periodic check.
- [ ] Implement countdown timer component in the frontend showing hours/minutes left until ``endsAt``.

### ### Phase 3: 2-Tier Voting (Vote vs. Squad Commitment)

- [ ] Add ``squadMembers`` array to options in ``RoundState`` in ``server.ts``.
- [ ] Add ``/api/round/join-squad`` endpoint in ``server.ts``.
- [ ] Add "👉 Join Squad" button on problem/ballot cards with quick superpower picker.

### ### Phase 4: WhatsApp Integration & Shareback Loops

- [ ] Create ``WhatsAppBlastModal.tsx`` in host view with Launch, Reminder, and Results templates.
- [ ] Add post-vote "📱 Share to WhatsApp Group" banner with ``encodeURIComponent(waLink)``.

### ### Phase 5: Verification & End-to-End Testing

- [ ] Run ``npm run lint`` and ``npm run build``.
- [ ] Verify complete mobile flow in browser emulation (Sign in → Vote → Squad Signup → WhatsApp Share → View Results).
